Data Visualization with Power BI and Tableau

Practical – I

Roll No.: T005	Name: Ritesh Chaubey
Class: SYIT	Batch:1
Date of Assignment: 24/07/2026	Date/Time of Submission:24/07/2026

AIM:Getting Started with Tableau and Building Basic Visualizations.

- A. Connect to a CSV dataset and explore the Tableau interface**
- B. Identify and differentiate Measures and Dimensions**
- C. Convert fields between discrete and continuous and observe changes**
- D. Create and customize a basic bar chart**
- E. Build a line chart for time-series analysis**
- F. Create a geographic map visualization**
- G. Combine multiple charts into a simple interactive dashboard**

STEPS:

Step 1: Import the CSV File

1. Open Tableau Desktop.
2. Click Connect → Text File.
3. Select .csv(File).
4. Click Open.
5. Tableau will display the dataset in the Data Source tab.

Step 2: Open a Worksheet

1. Click on Sheet 1 at the bottom.
2. The left panel displays all the fields from the dataset.
3. Verify that all columns are loaded correctly.

Step 3: Create a Basic Area Chart

- Open **Sheet 1**.
- Drag **Year** to the **Columns** shelf.
- Drag **Number of Deaths** to the **Rows** shelf.
- Tableau automatically creates a **Line Chart**.
- In the **Marks** card, change the chart type to **Area**.
- Drag **Number of Deaths** to **Label** to display the total deaths for each year.
- Format the chart title as **Total Deaths Over Time**.
- The chart shows the trend in the total number of deaths from **1970 to 2010**.

Sheet 4: Create a Basic Area Chart

- Open Sheet 2.
- Drag Year to the Columns shelf.
- Drag Sex to the Rows shelf.
- Drag Number of Deaths to the Rows shelf.
- Tableau automatically creates a Bar Chart.
- Drag Year to Label to display the corresponding year on each bar.
- Adjust the bar size and formatting for better visibility.
- The chart compares the number of deaths by Male, Female, and Both categories across different years.

INSIGHT:

- Total deaths increased steadily from **172.9 million in 1970** to **210.6 million in 2010**.
- The highest number of deaths was recorded in **2010 (210.6 million)**.
- The lowest number of deaths was recorded in **1970 (172.9 million)**.

- The largest increase occurred between **1990 and 2000**, indicating a significant rise in global mortality.

INSIGHT:

- Death counts increased consistently for **Male, Female, and Both** categories from **1970 to 2010**.
- **2010** recorded the highest mortality across all three categories.
- **1970** recorded the lowest mortality across all categories.
- The increasing pattern is similar for both males and females, indicating a steady rise over time.

Step 5: Create a Geographic Map

- Open **Sheet 3**.
- Double-click **Country Name** to generate a world map.
- Tableau automatically creates a **Symbol Map**.
- Drag **Number of Deaths** to **Size** to represent deaths using bubble size.
- Drag **Country Name** to **Color** to assign different colors to each country.
- Drag **Number of Deaths** to **Label** to display the death count on the map.
- The map shows the geographical distribution of deaths across different countries.

Sheet 3

INSIGHT:

- The map displays the geographical distribution of deaths across different countries.
- Countries with **larger populations** report significantly higher death counts than smaller countries.
- There is considerable variation in mortality levels across different regions of the world.
- Several countries record deaths in the **millions**, while many smaller nations have comparatively lower values.
- The map helps identify regional mortality patterns and compare country-wise death statistics.
-

Step 6: Create an Interactive Dashboard

Dashboard Name: Superstore Sales Dashboard

1. Click the New Dashboard icon at the bottom of Tableau.
2. Rename the dashboard as Superstore Sales Dashboard.
3. Set the dashboard size to Automatic.
4. Drag the following worksheets from the Sheets pane to the dashboard:
 - (Area Chart)
 - (Bar Chart)
 - (Geographic Map)
5. Arrange all the worksheets neatly using the Tiled layout.
6. Resize each visualization so that all charts are clearly visible.
7. Verify that all visualizations display the data correctly.
8. Save the dashboard.

DASHBOARD INSIGHTS:

- Global deaths increased steadily from **172.9 million in 1970** to **210.6 million in 2010**.
- Mortality trends show a consistent increase across **Male, Female, and Both** categories.
- The world map highlights the unequal distribution of deaths across countries, with highly populated nations contributing the largest share.
- The **Year filter** allows users to interactively analyze mortality data for specific years.
- The dashboard combines **time-wise, gender-wise, and country-wise** analysis, providing a comprehensive overview of global mortality trends and regional variations.

The dashboard shows a **steady increase in global deaths from 1970 to 2010**, with **2010 recording the highest mortality**. Death counts increase consistently across **Male, Female, and Both** categories, while the world map highlights significant variations in mortality among different countries. By combining **time-wise, gender-wise, and country-wise** visualizations with an interactive year filter, the dashboard enables quick and effective analysis of global mortality trends and regional differences over time.
